The update script will attempt to start isi_km_d automatically, but in some cases this may not work. If you are working on an un-configured SED node and the update fails, create a cluster or join the node to a cluster first, and then try the update again. If the issue persists, contact Isilon Support for assistance.

The capability to create manually-defined node pools is available only through the OneFS command-line interface, and should be deployed only after consulting with Isilon Technical Support. If you try to remove a node from a node pool for the purpose of adding it to a manual node pool, and the result would leave fewer than three nodes in the original node pool, the removal fails.

A node pool is a group of three or more Isilon nodes that forms a single pool of storage. As you add nodes to your Isilon cluster, OneFS attempts to automatically provision the new nodes into node pools. To autoprovision a node, OneFS requires that the new node be of the same equivalence class

as the other nodes in the node pool.
